

John Yates

Full-Stack Web Developer

JohnDYates@gmail.com | (318) 451-7672 | johndyates.com | github.com/cycoconutz | Lafayette, LA

SUMMARY

Full-stack web developer at KUKUI building the web applications automotive service businesses rely on every day. Work starts in React and HTML/CSS, runs through Node/Express APIs, and lands in MySQL and MongoDB - turning dense operational logic (POS integrations, inventory, employee scheduling) into screens people trust. Ships features end to end with Jest-driven testing and AI-assisted tooling, and migrated a REST backend to GraphQL with Apollo. Moved from a 450+ hour immersive bootcamp into a production role at KUKUI.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, Python, SQL, HTML5, CSS3
Frontend	React 18/19, Redux, Zustand, React Router, TanStack Query, Tailwind CSS, PWA / Service Workers, Dexie / IndexedDB (offline-first), Recharts (data visualization), Responsive, accessible UI
Backend	Node.js, Express, Fastify, REST API design, GraphQL / Apollo, SQL (PostgreSQL, MySQL), MongoDB, Drizzle ORM, Zod, Neon (serverless Postgres), Session auth / httpOnly cookies
Tools & Workflows	Git / GitHub, GitHub Actions, Vite, Jest / Vitest, React Testing Library, Playwright, Docker, Render, Figma, Linux, AI-assisted tooling

EXPERIENCE

Full-Stack Web Developer — KUKUI

2022 - Present

- Build and maintain web applications for automotive service businesses, owning features from build through release and chasing bugs to the root.
- Develop React, JavaScript (ES6+), Redux, HTML5, and CSS3 UIs, treating Jest as part of the workflow rather than an afterthought.
- Ship Node/Express APIs backed by MySQL and MongoDB, converting dense operational logic (POS integrations, inventory, employee scheduling) into clear, trustworthy interfaces.
- Migrated a REST backend to GraphQL with Apollo, working comfortably across both API styles.
- Collaborate directly from Figma designs with product and design, keeping work functional on phones, not just laptops.

SELECTED PROJECTS

Lulla

lulla.dev/landing/ | github.com/cycoconutz/lulla | *TypeScript · React · Vite · Dexie*

- Local-first Dexie/IndexedDB store, fully usable offline, with anonymous cloud backup and merge
- Log feeding, sleep, diaper and growth events with timers and rich sleep graphs
- Seven-day stacked trends (sleep, feeding, awake) and a month calendar heatmap
- Age-based guides and a mom vault: moods, pregnancy, postpartum weight and vitals, water

Karmatic

karmatic.onrender.com/ | github.com/cycoconutz/Karmatic | *JavaScript · React · Express · MongoDB*

- MongoDB, Express, React and Node built as one SPA
- Session authentication across the client and API
- Live data backed by a document database
- Shipped by a team of three on a deadline

Deadwax

deadwax-exee.onrender.com/ | github.com/cycoconutz/deadwax | *TypeScript · React · Fastify · PostgreSQL*

- Fastify 5 API with Drizzle ORM over PostgreSQL, behind a node:crypto session layer with httpOnly cookies
- Postgres full-text search (websearch_to_tsquery) with ranked results, filters, five sort modes and pagination
- Transactional checkout: stock decrement, simulated payment record, cart clear, all in one commit
- Seller fulfillment state machine that recomputes order status as each line item ships

TwilightVotes

www.twilightvotes.com/ | github.com/cycoconutz/twilightvotes | *React · TypeScript · Tailwind CSS · TanStack Query*

- Session-scoped state with instant updates across connected players
- Faction seating and speaker-aware voting order
- Ballot revision and abstentions with a live running total
- Built to be read across a table, not a single monitor

Vault

cycoconutz.github.io/vault/ | github.com/cycoconutz/vault | *TypeScript · React · Vite · REST API*

- Debounced search synced to the URL for shareable, restorable queries
- Faceted filtering across department, medium and date
- Lazy, resilient imagery with progressive loading and graceful failures
- Hard-edged brutalist layout with zero rounded corners

EDUCATION

Full-Stack Web Development Bootcamp — University of Texas at Austin

450+ hour immersive covering MERN (MongoDB, Express, React, Node.js), algorithms, and collaborative development. | Completed 2022
